

Integrate your Medical Devices with Hospital and Clinical Information Systems

SOA Architecture
Web Services based
Standard XML/SOAP/HL7/W3C

Powered by SmartCom
The new HealthCare Specialized Middleware

SmartConnect is the SoftwareTeam's platform for biomedical devices integration into Clinical and Hospital Information Systems.

Several integration solutions are available to fulfil most of the customer's needs:

- *Web Services*
- *IP sockets*
- *Shared database tables*
- *Data interchange shared areas*
- *.....*

*SmartConnect uses **SmartCom**, specialized integration middleware that makes available a driver for each biomedical device to be connected.*

These are SmartConnect main features:

- *Patient demographics search into the Hospital main database*
- *Query of demographics to Clinical Information Systems*
- *Data receiving from Clinical and Hospital Information Systems*
- *Data sending to Clinical and Hospital Information Systems*
- *Document sending to the central Repository*
- *Images sending to PACS*

Don't hesitate to contact us to discuss your integration needs: we can study specific solutions for every environment.

If you believe you could need SmartConnect, send us features and communication protocols of your devices: our staff will study it and give you a report of the integration sceneries.

If you'll agree with our proposal, your devices will be added to the "SmartCom ready devices" list.
