

Healthcare Solutions

Since 1989, Software Team makes its business in healthcare software development.

All the software projects are run directly or in cooperation with other companies, and can satisfy many different needs of ICT in Healthcare.

Software Team realized SmartCom, the leading solution for biomedical devices management. SmartCom is managed in cooperation with Treis, a company specialized in web applications.

SmartCom-based solutions are available for Analytical Laboratories, Points of Care, Hospital Departments, Telehealthcare and Remote Patients Care.

In cooperation with Mindray Medical, a major company in patients monitoring, Software Team developed SmartLink, a specialized system for remote management of monitoring data, waveforms, trends and replays. SmartLink is a SmartCom-based solution.

In conjunction with Noemalife SpA, the biggest Italian company in healthcare software production, Software Team manages Dasilab, one of the most popular Laboratory Information Systems in Italy.

Dasilab uses SmartCom to manage the on-line connections with the analyzers.

SmartSISS is the specialized solution to integrate healthcare management systems with SISS, the Healthcare Information Platform of the Lombardia Region in Italy. SmartSISS is the easiest way to connect all existing data management systems to SISS.

With SmartGate every Healthcare Information System can "go on the Web" and easily interact with patients and doctors.

SmartGate manages the medical reports collection, electronic sign, time stamp, and gives documents to the patients using encrypted e-mail attachments, web downloads, SMS notifications of documents availability.

Software Team is active in Italy directly and through the "Software Team Points", to give his customers a high level technical support.
